

# Replacing the Bridge on Grandview Road

The Grandview Road bridge over Bannister Road is old and in bad condition. MoDOT will remove and replace the 43-year-old bridge starting next spring.

The project will take about four months and require closure of Grandview Road over Bannister Road.

During construction, traffic will detour to 95th Street, which parallels Bannister on the north; to 95th Terrace, which parallels Bannister Road on the south; and to Crestview Drive, which is just east of Grandview Road.

The existing Bannister Road median will be removed and temporary signals will be placed at the intersection of Bannister Road and Crestview Drive to

provide access across Bannister and allow local traffic from Bannister Road to access Grandview Road and neighborhoods to the north and south.

Bridge demolition will occur over one weekend and require closure of Bannister Road for more than a day. Once debris is removed, Bannister Road will re-open. However, occasional short-term closures will be scheduled to place bridge

beams over Bannister Road.

Both eastbound and westbound Bannister Road lanes will be restricted at various times to allow workers a safe work site.

Bannister Road also will be closed at various times to accommodate lowering of the eastbound and westbound lanes. Lowering of Bannister Road is necessary to provide sufficient clearance for trucks and tall loads beneath the new bridge. Temporary crossovers will be constructed and traffic will be restricted to single, head-

to-head lanes during most of the construction.

Bannister Road is a state highway, Route W, between the Kansas state line and I-435.
