**Route 5 Shared-Four Lane in Laclede County**  
Construction Begins — Spring 2009  
Project Completion — Summer 2010

**Route 5 Relocation in Camden County**  
Construction Begins — Spring 2006  
Project Completed — Summer 2010

## Timeline

Missouri Department of Transportation  
Summer 2008

# New Missouri Route 5, Camdenton — Lebanon

### Highlights

- Shared-four lane highway to improve safety and traffic flow
- Current traffic volume — 8,000 vehicles per day
- Project length — 18 miles
- Miles of passing lanes — 13.7 miles
- Construction cost — \$44 million
- Construction schedule — Work began summer 2008, to be completed mid-2010

## Shared Four-Lane Highway

Between Route 7 in Camden Co. and Lebanon in Laclede Co.

*What's Being Built* — A shared four-lane highway will be built for 18 miles of Route 5 in Camden and Laclede counties to improve safety and to better accommodate increasing traffic. This innovative highway design is the first project of its kind to be constructed in Missouri.

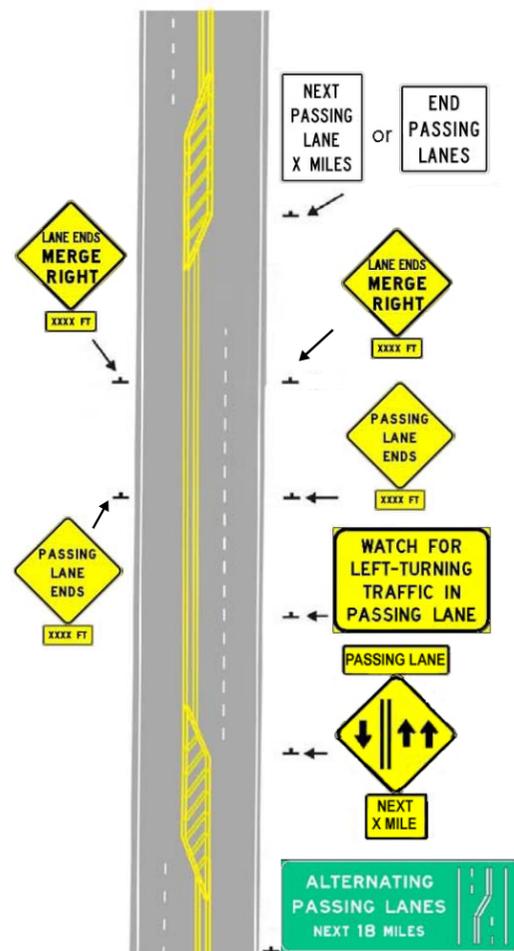

*The Improvement* — A shared four-lane highway consists of alternating passing lanes along a conventional two-lane highway to provide drivers with periodic opportunities to pass other vehicles without having to drive in the opposing lane. The project will relocate eight miles of Route 5 east of the existing roadway between Route 7 near Camdenton and the Laclede/Camden county line. Additional passing lanes will be added to the remaining 10-mile section of existing Route 5 between the Laclede/Camden county line and the city of Lebanon.

*When the Improvement Will Happen* — Construction of the shared four-lane in Camden County began in 2008. Shared four-lane construction will begin in Laclede County in late 2008 or early 2009. Completion of the shared four-lane in Camden and Laclede counties will be in mid-2010.

*What It Will Look Like* — The graphic on the inside of this brochure provides an example of how Route 5 will look when completed.

The shared four-lane highway in Camden County will connect to a new 7-mile long section of four-lane roadway between Route 5/7 north of Camdenton and Route 7 south of Camdenton.

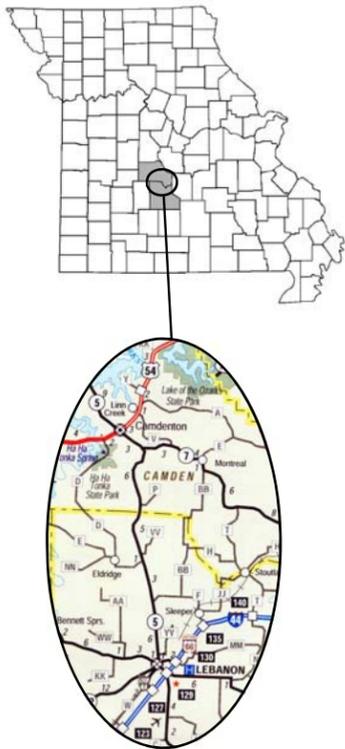

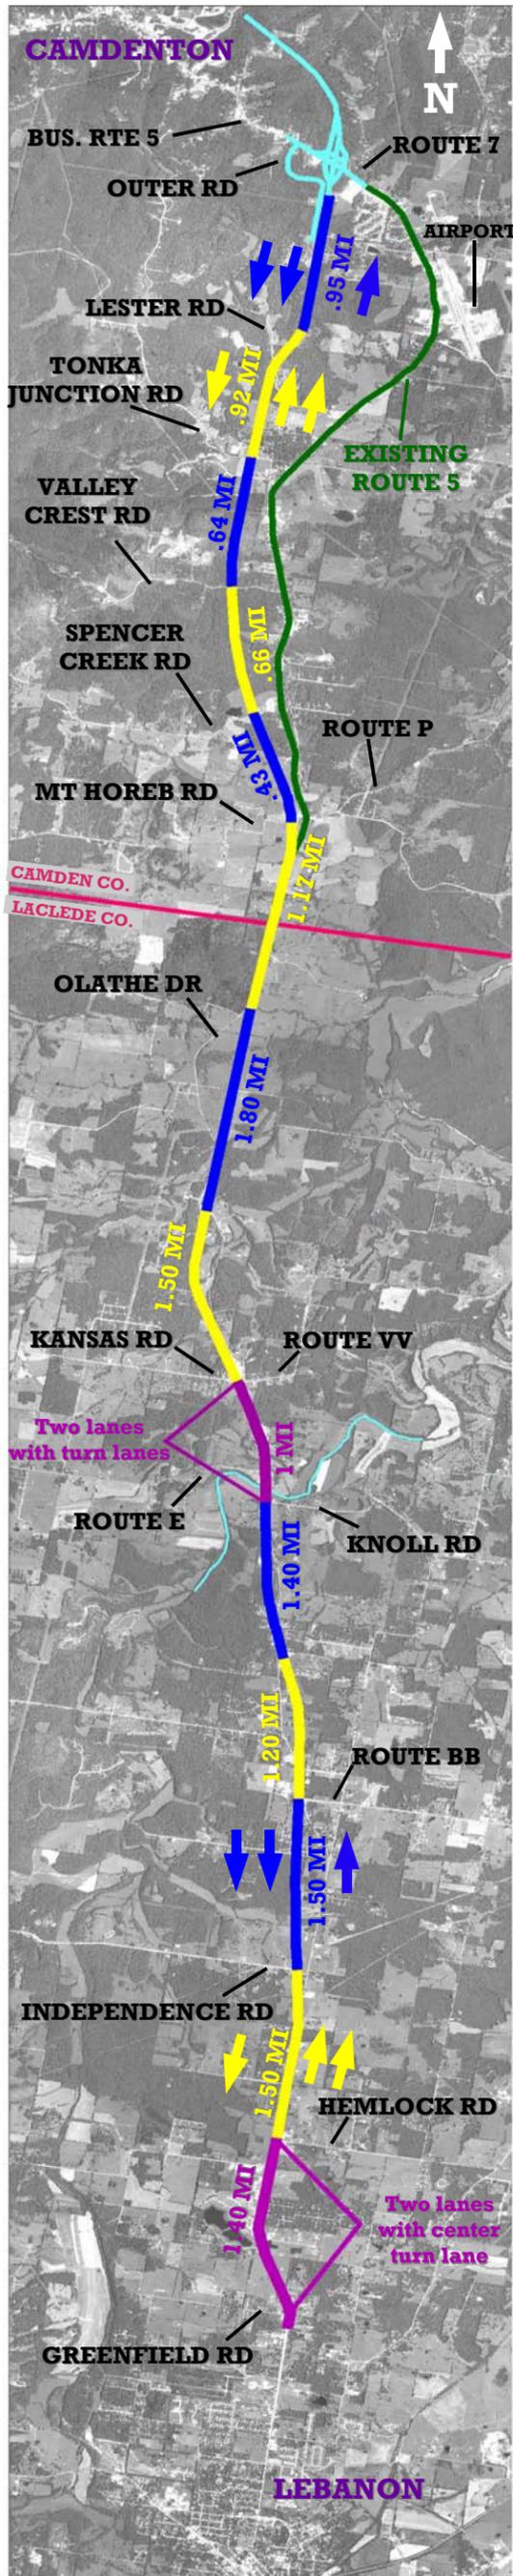

## What It Looks Like

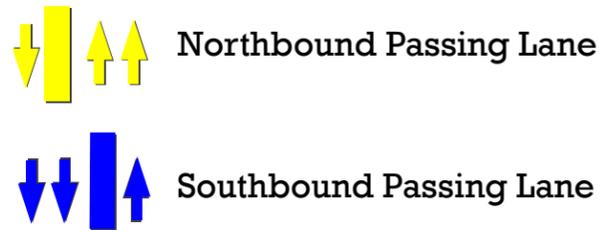

# Shared Four-Lane Highway

North End of Project at Route 7 near Camdenton

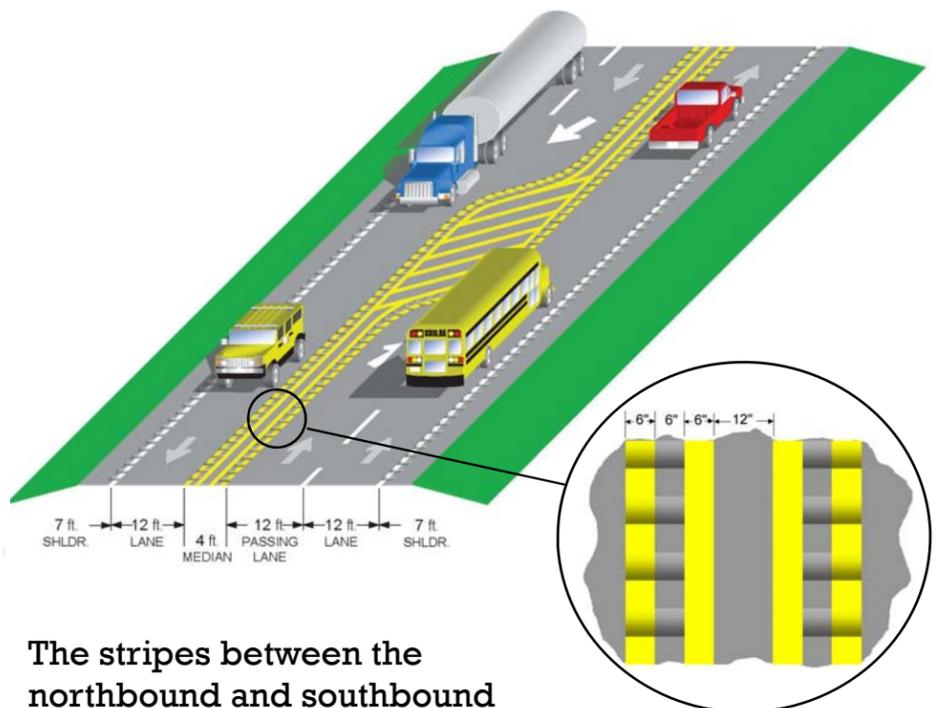

South End of Project at Greenfield Road near Lebanon

Drawings and maps not to scale.

## Median Rumble Stripes

The stripes between the northbound and southbound lanes will be placed over milled depressions in the pavement called **rumbles**. An audible noise and vibration alerts drivers when the vehicle tires move over the rumbles. These **rumble stripes** will be used along the shared four-lane highway to encourage drivers to remain safely in their lanes.
